

Amar Vashishth

Senior Software Engineer

+81 90 5769 2401 | vashishth.amar@gmail.com | LinkedIn | GitHub | LeetCode

Profile

Backend and platform engineer with 7+ years building high-throughput commerce systems, messaging platforms, and cloud-native services. Strong track record in service modernization, zero-downtime migrations, production reliability, security, and developer tooling across Java, Python, Go, React, Kafka, Kubernetes, and major SQL/NoSQL databases.

Education

Master of Technology | Computer Science and Engineering

Indian Institute of Technology Madras

2017 – 2019

Chennai, Tamil Nadu

Work Experience

Applications Engineer

Rakuten

July 2023 – Present

Tokyo, Japan

– High-Scale Commerce Platform Modernization

Java Spring Boot Python Kafka React Oracle Couchbase Redis

- * Modernized customer-history, gift-history, and bookmark services supporting **34,000 requests per second** for Rakuten's commerce storefront.
- * Executed zero-downtime, rollback-safe migration from Couchbase to Oracle while preserving service continuity for high-traffic user history flows.
- * Migrated *ashiato.rakuten.co.jp* storefront capabilities to a React-based architecture and integrated production AI features into existing service workflows.

– Cloud Migration, Delivery, and Reliability

Kubernetes Jenkins AWS Istio Envoy GSLB Apache

- * Moved critical services from bare-metal infrastructure to cloud and hybrid-cloud platforms with Kubernetes deployments and real-time configuration updates.
- * Took on acting tech lead responsibilities during team transition, coordinating operations, technical priorities, incident response, and service continuity for critical commerce systems.
- * Modernized coupon-platform services from PHP 5 to PHP 8 with Symfony, while supporting ingress, gateway, VIP, GSLB, and load-balancing changes.
- * Improved production readiness through observability, alerting, security upgrades, vulnerability remediation, and large-scale load/stress testing for Rakuten Super Sale events.

Senior Software Engineer

Myntra (Walmart)

July 2019 – July 2023

Bengaluru, Karnataka, India

– Messaging, Streaming, and Data Security Platforms

Java Python Go JavaScript Kafka Security

- * Architected and maintained enterprise messaging infrastructure handling **60,000 requests per second** with 100% uptime.
- * Built and maintained Java, Python, JavaScript, and Go SDKs to standardize messaging adoption across engineering teams.
- * Designed cross-datacenter topic replication with self-service capabilities and built secure Kafka handling for PII and sensitive data.

– Business-Critical Backend Systems

Java Spring Boot MySQL REST API Security C#

- * Developed high-performance PLM backend services processing **100,000 requests per minute** as an internal alternative to PRM360.
- * Built real-time API protection and client metadata management through KnowYourClient, processing 250K monthly requests without requiring service modifications.
- * Delivered C# Excel automation plugin for PLM operations, reducing manual validation and upload effort for business users.

– Reliability, Observability, and Platform Operations

ELK Stack Prometheus Grafana Docker MySQL 8 Load Testing

- * Integrated ELK logging, StatsD, InfluxDB, Prometheus, and Grafana with email and Slack alerting for mission-critical services.
- * Built database-backed scheduler locking to coordinate distributed jobs and improve concurrent process reliability.
- * Containerized backend services, led MySQL 5.7 to MySQL 8 migration work, and performed Kafka broker stress tests before major sale events.

Skills

Languages: Java, Python, Go, JavaScript, TypeScript, Rust, C#, C/C++, PHP

Backend and Web: Spring Boot, FastAPI, Actix Web, Symfony, React, Node.js, REST APIs, Nginx, Apache HTTP Server

Data and Messaging: Kafka, RabbitMQ, Redis, MySQL, Oracle, MongoDB, Couchbase, SockJS

Cloud and DevOps: Kubernetes, Docker, Jenkins, GitHub Actions, Ansible, AWS, Microsoft Azure, Rakuten One Cloud

Reliability and Testing: Prometheus, Grafana, ELK Stack, StatsD, InfluxDB, Gatling, k6, JUnit, Mockito, Hurl, Behat

Projects and Research

Machine Learning and Data Engineering

Deep Learning Computer Vision Data Engineering

- Built a deep-learning workflow for automated nutritional information analysis of Indian cuisines, including dataset engineering and algorithmic value estimation.

Robotics and Applied Algorithms

Robotics Navigation Algorithms

- Designed autonomous navigation and obstacle-avoidance algorithms for a 4-wheeled Lego NXT robot.

Semantic Web and Classification Systems

SPARQL Java APIs Bayesian Classification

- Implemented SPARQL/RDF query projects and a Java-based Bayesian email classification system integrated with the Gmail API.
